FileAudit®
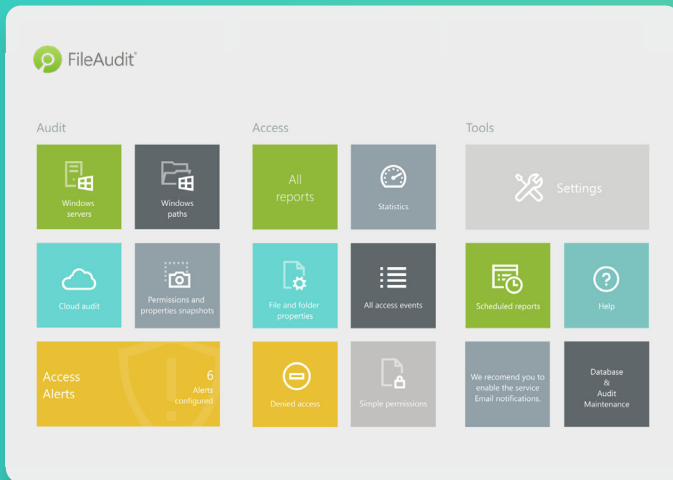

Data Protection for Windows File Servers and Cloud Storage. **The Easy Way.**

Protect sensitive data from theft, alteration or deletion with **secure access and usage** of all file activity, both on-premise and in the cloud.

> **Access a single view** of all file activity across servers and cloud

> **Get alerts** on potential data breaches

> **Set automatic responses** to stop suspicious access

> **Analyze access forensics** quickly and accurately

> **Meet compliance** & insurance requirements

> **Prevent ransomware** by detecting massive file encryption and specific file extensions

Faster, Smarter & More Efficient Auditing **with FileAudit**

1 Real-Time Monitoring
Get real-time insights into all file access events, including granular detail to pinpoint where the user accessed (or attempted to access) data.

2 Alerts & Automated Response
Set up alerts and automatically trigger responses to suspicious file activity, such as bulk file copying, deletion and movement.

3 Centralized Access Auditing
Run customized reports from multiple servers (Windows and cloud storage providers) through a searchable, secure and centralized audit trail.

4 NFTS Permissions Reporting
Get actionable information on changes to NTFS permissions and gain better insight into access rights across the entire file system directory.
